# Please Install Libusb-compat First

## Install the App

1. Press `Command+Space` and type *Terminal* and press ***enter/return*** key.

2. Type `gcc --version` and press **enter/return** key

3. Type

   ```
   ruby -e "$(curl -
   fsSL https://raw.githubusercontent.com/Homebrew/install/master/install)"
   ```

   and press **enter/return** key

   If you are prompted for a password, please type the MAC administrator password. When you typed the password, the password may not be displayed. Please ignore and press **enter/return** key. Then wait until the installation library is installed.

4. Type brew install libusb and press **enter/return** key

5. Type brew install libusb-compat and press **enter/return** key

6. If the software still cannot connect to the keyboard, please type brew install libusb-compat in the terminal again and press **enter/return** key. At this time, the Mac may prompt the user "Do you want to allow amag to access the USB controller?" Please click "YES"

Done! You can connect Koolertron keyboard to your Mac and run the amag software
